

CSE0001 - Digital Literacy Project Report

Utkarsh Agrawal 25BCE10349 Branch & Year: Core, CSE 1st Year

Course Code: CSE0001 - Digital Literacy

Date: 28 March 2026

Introduction

In this project, I worked as a Student Digital Ambassador to build a complete Digital Literacy Portfolio for my batch. The goal was to learn how to use common online tools, create a professional presence, and practise safe and responsible behaviour on the internet. The assignment was divided into five tasks: designing an awareness infographic, setting up a student portfolio, exploring coding and collaboration platforms, drafting professional emails and social media guidelines, and studying a cybercrime case with prevention tips. Each task made me use real platforms like GitHub, LinkedIn, and Google Forms, instead of only reading theory. By the end, I not only completed the checklist, but also understood how these tools will support my learning, internships, and safety in the digital world.

Task 1 - Digital Literacy Awareness Infographic

For Task 1, I created a one- page infographic on digital literacy using Canva. My design focused on three main ideas: what digital literacy means, useful digital tools for students, and safe internet practices for everyday use. I used simple icons, short phrases, and contrasting colours so that the information would be easy to read even at a glance. I also added a small section on professional online presence and basic email etiquette, because many students are still not careful about how they appear online.

While making the infographic, I found it interesting to convert long paragraphs into small visual blocks. The most challenging part was choosing what to keep and what to remove, since the slide could not be overloaded with text. This task showed me that good digital communication is not only about correct content but also about clear and attractive presentation.

Student Digital Portfolio

In Task 2, I built my student digital portfolio by creating or updating accounts on three platforms: GitHub, LinkedIn, and Kaggle. On GitHub, I made a special profile README repository with my name, branch, year, and a short line about what I want to learn during my [B.Tech](#). On LinkedIn, I filled in my education details, including my current degree at VIT Bhopal and my expected graduation year, and kept the profile professional and minimal. On Kaggle, I explored how it can be used for data science practice and academic networking.

For each profile, I took screenshots and stored them in the task- 2- portfolio folder as required. Through this task, I realised that a digital portfolio is like an online CV that keeps growing with our projects and achievements. Over the next four years, I plan to keep updating these platforms with new repositories, certificates, and internships so that opportunities can find me even before I start applying.

Task 3 - Coding & Collaboration Platforms

Task 3 introduced me to both coding practice platforms and cloud collaboration tools. For Part A, I created an account on HackerRank and completed a beginner- level challenge. Solving the problem helped me revise basic programming concepts and experience how online judges evaluate code automatically. I captured a screenshot of the completed challenge and any score or badge shown on the platform and saved it in the task- 3- platforms folder.

For Part B, I used Google Forms to design a "Digital Literacy Awareness Quiz" with exactly five questions, including at least one multiple choice and one short answer question. I linked the form to a Google Sheet to view responses and added screenshots of both the form and the sheet to the same folder. This task made me appreciate how simple tools like Google Forms can be used for surveys, feedback, and quizzes in real academic situations. Overall, these platforms will help me practice coding regularly and collaborate smoothly with classmates on future projects.

Task 4 - Email Etiquette & Social Media Guidelines

In Task 4, I wrote two professional emails to practise proper online communication. The first email was from a student to a professor, politely requesting an extension for an assignment deadline with a clear subject, respectful tone, and formal sign- off. The second email was addressed to an internship coordinator, expressing interest in a summer internship and briefly highlighting my skills and motivation. Both drafts followed standard etiquette, including greetings, structure, and closing lines.

I also created a Social Media Do's and Don'ts checklist with at least five positive behaviours and five things to avoid as a college student. One situation that stood out to me was how careless or rude messages can easily be misinterpreted and damage relationships or reputation. This task taught me that digital communication is permanent and that we must think before we post, comment, or send any message.

Task 5 - Cybercrime Awareness & Prevention

For Task 5, I selected phishing as my cybercrime topic. I wrote a detailed case study explaining what the crime is, how it usually happens step- by- step, who is typically targeted, and what the consequences can be. I saved this write- up as a separate file in the task- 5- cybercrime folder. I then created a "Stay Safe Online" checklist with at least eight practical tips for college students in India, including at least two points about UPI and online payment safety. I also mentioned the official reporting channels: the National Cyber Crime Portal (cybercrime.gov.in) and the 1930 helpline.

While researching, I was surprised by how common and sophisticated these attacks have become, especially on social media and payment apps. As a result, I have decided to double-check links, avoid sharing OTPs or PINs, and be more cautious about unknown messages and calls.

Conclusion

This project helped me move from being just a regular internet user to a more confident and responsible digital citizen. By completing all five tasks, I learned how to build a professional online portfolio, practise coding on real platforms, create collaborative tools like quizzes, and communicate more formally by email. I also became more aware of cybercrimes and the importance of prevention and reporting. The GitHub repository I created will remain as a starting point for my future projects and internships. Overall, the Digital Literacy project connected theory with real tools that I will continue using throughout my degree.
